Paper Abstract: In this paper we, develop a statistical model for the Gaussian distribution and investigate the accuracy of the model. In our study we chose the following methods of approximation of the distribution: Monte Carlo simulation, Maximum likelihood estimation (MLE), Log-likelihood estimation (LLE), and Kullback-Leibler information divergence (KLD). It is shown that the MLE is to a large extent superior to the LLE and the KLD. These are generally called numerical methods of differential equations, because we solve Pdf - again -.
